DECLARATION

I hereby declare that the Social Internship Final Report entitled

HEALTH AND HYGIENE

submitted to KL University in partial fulfilment
of the requirements of the Social Internship Program
is a bonafide record of the work carried out by me
during the **Academic Year 2025-26**.

I further declare that this report has not been
submitted previously, either in part or full,
to any other university or institution for
the award of any degree, diploma, or certification.

The information, findings, observations,
and activities documented in this report
are based on my own field work and learning
during the Social Internship Program.

Acknowledgement

I would like to express my sincere gratitude to KL University and the Student Activity Centre (SAC) for providing me with the opportunity to participate in the Social Internship Program.

I extend my heartfelt thanks to **Er. P. Sai Vijay, Director, SAC,** for his valuable guidance, encouragement, and continuous support throughout the internship.

I would also like to express my gratitude to the **SAC Student Council** for their coordination, guidance, and assistance during the successful execution of the Social Internship activities.

I sincerely thank the **faculty mentors, community stakeholders, village representatives,** and **all individuals** who contributed valuable insights and support during the completion of this internship.

Finally, I express my gratitude to everyone who directly or indirectly supported me in completing this Social Internship and preparing this report.

KL UNIVERSITY
(Deemed to be University)

PREFACE

The Social Internship Program is an integral part of experiential learning at KL University, designed to provide students with practical exposure to real-world community issues and social challenges.

This program aims to develop social responsibility, problem-solving abilities, community engagement, leadership skills, and awareness of societal needs among students through active field interaction and participatory learning.

During the internship, students are encouraged to identify community problems, conduct surveys, interact with stakeholders, analyze findings, and design meaningful intervention activities to create awareness and positive social impact.

This report presents the field observations, learning experiences, findings, activities, and outcomes documented during the successful completion of the Social Internship Program for the Academic Year 2026–27.

“Learning Beyond Classrooms

Through Community Engagement”

CHAPTER 1

INTRODUCTION

1.1 Introduction to Project Title

Agriculture is one of the most important sectors contributing to the economy and livelihood of rural communities. Farmers play a major role in food production and maintaining the agricultural balance of society. However, increasing environmental issues, excessive use of chemical fertilizers, soil degradation, water scarcity, and climate change have created serious challenges in the agricultural sector. These challenges highlight the importance of adopting sustainable farming practices that can protect the environment while improving agricultural productivity and farmer well-being.

In many developing and rural communities, issues related to poor hygiene practices, inadequate sanitation, and unsafe drinking water continue to affect people's health and living conditions. Lack of awareness regarding personal hygiene, improper waste disposal, and contaminated water sources often result in various health complications, including waterborne diseases and infections.

The project title “Health and Hygiene” focuses on understanding the importance of maintaining proper hygiene practices and identifying major health-related concerns existing within the community. Through field visits, surveys, stakeholder interactions, and awareness activities, this study aims to assess community behavior, identify existing challenges, and understand the overall level of awareness regarding hygiene and public health.

Furthermore, the study highlights the importance of preventive measures, health awareness, and community participation in promoting healthier lifestyles. By engaging directly with the local community, the internship provides an opportunity to understand real-world health challenges and contribute toward creating awareness and encouraging positive behavioral changes.

CHAPTER 1

INTRODUCTION

1.2 Problem Statement

Agriculture plays a vital role in supporting rural livelihoods and ensuring food security. However, modern farming practices that rely heavily on chemical fertilizers, pesticides, and excessive water usage have created serious environmental and agricultural challenges. Soil fertility degradation, water scarcity, environmental pollution, declining crop quality, and increasing farming costs have become major concerns affecting farming communities. Despite the availability of sustainable agricultural techniques and government initiatives promoting eco-friendly farming, many farmers continue to lack awareness regarding sustainable farming practices. Limited knowledge regarding organic farming, natural fertilizers, crop rotation, water conservation methods, and soil management practices negatively affects agricultural sustainability and environmental health.

Many farmers continue to depend on traditional chemical-based farming methods due to lack of education, limited access to training programs, financial limitations, and insufficient awareness regarding environmentally friendly agricultural alternatives. Excessive use of pesticides and fertilizers not only affects soil fertility and crop quality but also impacts groundwater quality, biodiversity, and human health.

Improper irrigation practices and poor water management further increase agricultural problems in many farming regions. Farmers often face difficulties in understanding modern irrigation techniques such as drip irrigation and rainwater harvesting that can help conserve water resources and improve farming efficiency.

The selected problem statement, “Lack of Awareness on Sustainable Farming,” was chosen to understand the current agricultural challenges faced by farmers and analyze the level of awareness regarding eco-friendly farming practices. Through field surveys, stakeholder interaction, farmer discussions, and observation, the study aims to identify the root causes responsible for limited awareness and understand how these challenges affect agricultural productivity and environmental sustainability.

The study also focuses on evaluating the need for awareness programs, farmer education initiatives, and intervention activities that can encourage sustainable agricultural practices and environmental responsibility among farming communities. Understanding these issues is essential for promoting healthier agricultural methods, protecting natural resources, improving farmer livelihoods, and ensuring long-term sustainability in agriculture. behaviors. Through

CHAPTER 1

INTRODUCTION

1.3 Objectives of the Study

The primary objective of this study is to understand the level of awareness regarding sustainable farming practices among farmers and identify agricultural challenges affecting environmental sustainability, crop productivity, and farmer well-being.

The key objectives of this study are:

1. To assess awareness regarding sustainable farming practices

To understand the level of awareness among farmers regarding organic farming, eco-friendly agriculture, soil conservation, crop rotation, and sustainable irrigation methods.

2. To identify issues related to chemical fertilizer and pesticide usage

To examine how excessive dependency on chemical fertilizers and pesticides affects soil fertility, crop quality, environmental health, and agricultural sustainability.

3. To understand water management and irrigation practices

To analyze irrigation methods followed by farmers and identify challenges related to water conservation, groundwater usage, and efficient irrigation systems.

4. To interact with farmers and stakeholders

To collect field insights through surveys, farmer discussions, interviews, and interaction with agriculture officers, NGO experts, and local farming communities.

5. To create awareness regarding sustainable agricultural methods

To promote eco-friendly farming practices, environmental conservation, organic farming awareness, and responsible agricultural methods among farmers.

6. To understand real-world agricultural challenges

To provide practical exposure regarding farming issues, environmental concerns, and community-level agricultural challenges through field interaction and observation.

7. To encourage environmental responsibility among farmers

To highlight the importance of protecting soil, water resources, biodiversity, and environmental balance through sustainable agricultural practices.

CHAPTER 1

INTRODUCTION

1.4 Scope of Study

The scope of this study focuses on understanding the awareness levels regarding sustainable farming practices within the selected farming community and analyzing agricultural challenges affecting environmental sustainability and crop productivity.

The study was conducted to observe farming conditions, assess awareness regarding eco-friendly agricultural methods, and identify major concerns related to chemical farming, water management, and soil conservation. The study includes field visits, farmer interaction, stakeholder discussions, surveys, and observation activities to gather practical information regarding farming practices and environmental challenges.

Data was collected through direct interaction with farmers, agriculture officers, NGO experts, and community members to better understand their agricultural practices, farming difficulties, irrigation methods, fertilizer usage, and awareness regarding sustainable farming.

The scope of the study is limited to the selected farming area and respondents who actively participated in the survey and field interaction activities. The study mainly focuses on identifying agricultural problems, understanding awareness gaps, and promoting sustainable farming education rather than providing technical agricultural solutions.

Coverage of the Study

Area Covered:

Nearby Farming Villages and Agricultural Fields

Number of Respondents:

50 Farmers and Stakeholders (Sample Data)

Stakeholders Involved:

- Farmers
- Agriculture Officers
- NGO Experts
- Local Residents
- Agricultural Workers
- Students

Methodology Used:

- Field Survey
- Observation
- Farmer Interaction
- Stakeholder Discussion
- Data Collection & Analysis

Internship Duration:

7 Days

Problem Focus:

Lack of Awareness on Sustainable Farming

CHAPTER 1

INTRODUCTION

1.5 Sustainable Development Goals (SDG Alignment)

The Social Internship The Social Internship Program is aligned with the United Nations Sustainable Development Goals (SDGs), which focus on environmental sustainability, food security, responsible resource management, and community development. The selected project title, “Lack of Awareness on Sustainable Farming,” contributes toward promoting sustainable agricultural practices and environmental conservation within farming communities.

Through farmer interaction, field surveys, awareness programs, stakeholder engagement, and community participation, the study supports sustainable agricultural development by encouraging environmentally responsible farming methods and promoting awareness regarding eco-friendly agricultural practices.

SDGs Aligned with the Study

SDG 2 – Zero Hunger

This study contributes toward promoting sustainable agriculture, improving food production systems, and supporting healthier farming practices that ensure long-term food security.

SDG 12 – Responsible Consumption and Production

The study encourages responsible agricultural practices, reduced chemical dependency, efficient resource usage, and environmentally sustainable farming methods.

SDG 13 – Climate Action

Sustainable farming practices help reduce environmental damage, conserve natural resources, and support climate-friendly agricultural systems.

SDG 15 – Life on Land

The study promotes soil conservation, biodiversity protection, environmental balance, and responsible land management practices through sustainable agriculture.

CHAPTER 2

DAY-WISE LEARNING & FIELD WORK

2.1 Day 1 – Learning & Orientation Activities

The first day of the Social Internship Program focused on understanding the purpose, objectives, and expected outcomes of the internship. Students were introduced to the importance of community engagement, social responsibility, and experiential learning through structured orientation activities.

During the orientation session, detailed information regarding the project title “Health and Hygiene” and the selected problem statement “Unsafe Drinking Water & Hygiene Practices” was discussed. Students were guided regarding field work methodology, stakeholder interaction, survey techniques, and the overall execution process of the internship.

Research and preliminary learning activities were carried out to understand the significance of health and hygiene practices in society. Information related to sanitation, safe drinking water, preventive healthcare, and hygiene awareness was studied through online resources, discussions, and reference materials.

The day also focused on identifying the possible causes and consequences of poor hygiene practices and unsafe drinking water in communities. Initial understanding was developed regarding how improper sanitation and lack of awareness contribute to health-related challenges.

Activities Performed

- Internship Orientation Session
- Understanding the Project Title and Problem Statement
- Research on Health and Hygiene Practices
- Literature Review and Reference Study
- Understanding Community Challenges

Key Learning Outcomes

- Understood the objectives of the Social Internship Program
- Learned about the importance of health and hygiene in society
- Gained awareness regarding unsafe drinking water practices
- Understood field work methodology and stakeholder interaction process
- Developed preliminary understanding of community-based problems

CHAPTER 2

DAY-WISE LEARNING & FIELD WORK

2.2 Day 2 – Community Engagement Activities

The sThe first day of the Social Internship Program mainly focused on understanding the objectives, purpose, and expected outcomes of the internship related to sustainable farming awareness. Students were introduced to the importance of agriculture in rural development and the growing need for environmentally friendly farming methods. The orientation session provided detailed information regarding the selected project title, “Lack of Awareness on Sustainable Farming,” and the importance of creating awareness among farmers regarding eco-friendly agricultural practices.

During the orientation activities, students learned about the current environmental challenges affecting agriculture such as soil degradation, water scarcity, excessive chemical fertilizer usage, and declining crop productivity. Discussions were conducted regarding sustainable farming techniques including organic farming, crop rotation, natural fertilizers, compost preparation, rainwater harvesting, and drip irrigation systems. Students also studied the long-term environmental impact caused by excessive use of chemical pesticides and fertilizers.

Research and literature review activities were conducted using online resources, articles, agricultural reports, and awareness materials to understand the importance of sustainable agriculture in improving soil fertility, conserving water resources, and protecting biodiversity. The orientation session also emphasized the role of farmers, agriculture officers, NGOs, and students in promoting environmental sustainability and responsible farming practices.

The first day helped students develop preliminary understanding regarding real-world agricultural problems and the importance of awareness and education in encouraging sustainable farming practices among rural communities.

Activities Performed

- Internship Orientation Session
- Research on Sustainable Farming
- Understanding Agricultural and Environmental Challenges
- Literature Review and Reference Study
- Introduction to Sustainable Farming Practices

Key Learning Outcomes

- Understood the importance of sustainable agriculture
- Learned the environmental impact of chemical farming
- Gained awareness regarding soil and water conservation
- Understood the importance of eco-friendly agricultural methods
- Developed understanding regarding farmer awareness programs

CHAPTER 2

DAY-WISE LEARNING & FIELD WORK

2.3 Day 3 – Survey & Field Activities

The second day of the internship focused on community engagement and direct interaction with farmers to better understand existing farming practices and agricultural challenges faced within the community. Students visited nearby agricultural fields and interacted with farmers to observe farming conditions, irrigation systems, crop cultivation methods, fertilizer usage, and environmental issues affecting agricultural productivity.

During the field visit, farmers explained the challenges they faced related to water availability, increasing fertilizer costs, pest attacks, declining soil fertility, and changing climatic conditions. Students observed that many farmers were highly dependent on chemical fertilizers and pesticides for crop production due to lack of awareness regarding sustainable and organic farming alternatives.

Discussions were also conducted regarding irrigation methods followed by farmers. Many farmers explained that improper water management and overuse of groundwater were affecting agricultural productivity and increasing farming difficulties. Students learned about traditional farming practices and identified the limited awareness regarding drip irrigation, rainwater harvesting, compost preparation, and organic fertilizers.

Interaction with agriculture officers and local residents provided additional understanding regarding the importance of farmer education, government support, and agricultural awareness programs in promoting sustainable farming methods.

The day provided practical exposure to real-world agricultural challenges and improved communication and observation skills among students through active farmer interaction and field observation.

Activities Performed

- Farmer Interaction and Discussion •
- Agricultural Field Observation •
- Understanding Irrigation Practices •
- Observation of Fertilizer and Pesticide Usage •
- Discussion on Farming Challenges •

Stakeholders Interacted

- Farmers •
- Agriculture Officers •
- Local Residents •
- Agricultural Workers •

Key Learning Outcomes

- Understood agricultural challenges faced by farmers •
- Observed excessive fertilizer and pesticide usage •
- Learned about water management problems in farming •
- Improved communication and observation skills •
- Identified limited awareness regarding organic farming methods •

identified limited awareness regarding organic farming methods

CHAPTER 2

DAY-WISE LEARNING & FIELD WORK

2.4 Day 4 – Reflection & Documentation Activities

The fourthThe third day of the internship focused on conducting field surveys and collecting relevant information from farmers regarding sustainable agricultural practices and environmental awareness. Students conducted structured surveys to understand farming methods, fertilizer usage, irrigation systems, awareness regarding organic farming, and environmental concerns affecting agriculture.

During the survey process, farmers shared their experiences regarding crop cultivation, soil fertility problems, water shortages, and increasing agricultural expenses. Survey questions were designed to understand awareness levels regarding crop rotation, natural fertilizers, composting, organic pesticides, and water conservation methods.

Field observations revealed that most farmers were dependent on chemical fertilizers and pesticides for improving crop productivity. Limited awareness regarding organic farming methods and sustainable agricultural practices was observed in several farming areas. Water conservation techniques such as drip irrigation and rainwater harvesting were not widely practiced due to lack of knowledge and financial limitations.

Despite these challenges, many farmers expressed interest in learning modern eco-friendly farming techniques and showed willingness to participate in awareness programs related to sustainable agriculture. Students recorded survey responses and organized collected data for further analysis and interpretation.

The survey activities provided practical exposure regarding data collection methods, farmer interaction, and agricultural field research while helping students understand the importance of awareness regarding environmental sustainability in agriculture.

Activities Performed

- Farmer Survey and Data Collection
- Interaction with Farming Communities
- Stakeholder Feedback Collection
- Observation of Agricultural Practices
- Recording and Documentation of Survey Responses

Survey Insights / Field Observations

- Most farmers depended on chemical fertilizers and pesticides
- Limited awareness regarding organic farming was observed
- Water conservation methods were not widely practiced
- Soil fertility concerns were identified
- Farmers showed interest in learning eco-friendly farming methods

Key Learning Outcomes

- Learned survey methodology and data collection techniques
- Improved field interaction and communication skills
- Understood practical agricultural challenges
- Identified awareness gaps regarding sustainable farming
- Gained practical understanding regarding farming practices

2.4 Day 4 – N

CHAPTER 2

DAY-WISE LEARNING & FIELD WORK

2.5 Day 5 – Data Collection & Analysis Activities

The fifth dayThe fifth day of the internship focused on organizing, reviewing, and analyzing the survey data collected from farmers and agricultural stakeholders during previous field activities. Students carefully examined survey responses to identify patterns related to sustainable farming awareness, fertilizer usage, irrigation practices, and environmental concerns affecting agriculture.

The collected data showed that many farmers lacked proper awareness regarding eco-friendly farming methods and sustainable agricultural techniques. Excessive dependency on chemical fertilizers and pesticides was observed among most respondents. Survey analysis also highlighted issues related to water wastage, declining soil fertility, and limited understanding regarding water conservation methods.

Students categorized survey responses based on farming practices, irrigation methods, awareness levels, and environmental concerns. Basic analytical methods were used to compare responses collected from different groups of farmers and stakeholders.

The findings indicated the need for awareness programs regarding soil conservation, organic farming, water management, and environmentally sustainable agricultural methods. The data analysis activities helped students understand the importance of agricultural research, data interpretation, and field-based problem analysis.

Activities Performed

- Compilation of Survey Responses
- Review of Farmer Feedback
- Analysis of Sustainable Farming Awareness
- Categorization of Agricultural Challenges
- Data Interpretation and Documentation

Key Findings

- Limited awareness regarding sustainable farming practices
- Excessive use of chemical fertilizers and pesticides
- Need for awareness regarding soil conservation
- Water wastage observed in irrigation systems
- Environmental concerns affecting agricultural productivity

Key Learning Outcomes

- Learned methods of organizing and analyzing survey data
- Improved analytical and observation skills
- Understood environmental challenges in agriculture
- Identified awareness gaps among farmers
- Developed problem-solving understanding regarding farming issues

CHAPTER 2

DAY-WISE LEARNING & FIELD WORK

2.6 Day 6 – Intervention & Awareness Activities

The sixth day of the Social Internship Program focused on The sixth day of the internship focused on conducting awareness and intervention activities to educate farmers regarding sustainable agricultural practices and environmental conservation. Based on the survey findings and field observations, awareness sessions were organized to encourage farmers to adopt eco-friendly farming methods and reduce dependency on harmful agricultural chemicals.

Students interacted with farmers and explained the importance of organic farming, water conservation, soil health management, crop rotation, and natural fertilizers. Informative discussions were conducted regarding the environmental impact of chemical farming and the benefits of sustainable agriculture in improving long-term agricultural productivity.

Awareness activities also included discussions on drip irrigation systems, rainwater harvesting methods, compost preparation, and natural pest control techniques. Farmers were encouraged to adopt healthier and environmentally responsible agricultural practices for improving soil fertility and reducing farming costs.

Community participation was observed during the awareness sessions, and many farmers expressed interest in learning more about sustainable farming methods and modern agricultural technologies.

The intervention activities helped students improve communication, leadership, and public interaction skills while contributing toward agricultural awareness and environmental sustainability.

Awareness Topics Covered

- Organic Farming
- Water Conservation Techniques
- Drip Irrigation Systems
- Soil Health Management
- Natural Fertilizers and Composting
- Crop Rotation Practices

Outcomes of the Awareness Activities

- Farmers actively participated in awareness sessions
- Increased interest regarding sustainable farming was observed
- Positive response regarding eco-friendly agricultural methods
- Awareness regarding water conservation increased
- Farmers showed willingness to learn modern farming techniques

Key Learning Outcomes

- Understood the importance of awareness activities in agriculture
- Improved communication and leadership skills
- Learned methods of community engagement
- Gained practical exposure regarding farmer education programs
- Understood the importance of sustainable agriculture for environmental protection

CHAPTER 3

SURVEY DATA ANALYSIS

The survey was conducted to understand the awareness levels regarding sustainable farming practices among farmers and agricultural stakeholders within the selected community. The data collection process mainly focused on identifying farming methods, fertilizer usage, irrigation systems, environmental concerns, and awareness regarding eco-friendly agricultural practices.

Information was collected through structured questionnaires, stakeholder interaction, field observation, and direct discussion with farmers, agriculture officers, and NGO experts. The survey provided valuable insights regarding agricultural challenges, environmental issues, and the need for awareness regarding sustainable farming methods.

Different categories of respondents participated in the survey process. Farmers shared practical information regarding cultivation methods, crop management, irrigation techniques, fertilizer usage, and soil-related problems. Agriculture officers provided technical understanding regarding government agricultural programs, sustainable farming initiatives, and farmer awareness activities. NGO experts contributed insights regarding environmental conservation, organic farming awareness, and rural agricultural development programs.

The collected responses helped in identifying awareness gaps, understanding community-level agricultural challenges, and analyzing the need for intervention activities related to sustainable farming awareness.

Respondent Categories

Respondent Type	Number of Respondents
-----------------	-----------------------

Farmers	
---------	--

8	
---	--

Agriculture Officers	
----------------------	--

2	
---	--

NGO Experts	
-------------	--

2	
---	--

Total Respondents	
-------------------	--

12	
----	--

Survey Methodology

- Questionnaire-Based Survey
- Farmer Interaction
- Stakeholder Discussion
- Agricultural Field Observation
- Community Feedback Collection

The survey process helped students gain practical understanding regarding agricultural research, data collection methods, and farmer engagement activities.

CHAPTER 3

SURVEY DATA ANALYSIS

3.2 Household Analysis The survey findings and field observations conducted during the Social Internship Program highlighted several agricultural and environmental challenges affecting the farming community. The responses collected from farmers, agriculture officers, and NGO experts revealed major concerns related to sustainable farming awareness, excessive chemical usage, water management, and soil fertility conditions.

The analysis showed that many farmers were still highly dependent on chemical fertilizers and pesticides for improving crop productivity. Limited awareness regarding organic farming, natural fertilizers, compost preparation, and crop rotation practices was observed among several respondents. Many farmers lacked proper understanding regarding long-term environmental effects caused by excessive chemical farming practices.

The survey also highlighted issues related to improper irrigation systems and water wastage. In many farming areas, traditional irrigation methods were followed without adequate awareness regarding water conservation techniques such as drip irrigation, rainwater harvesting, and efficient water management systems.

Soil fertility concerns were identified as another major issue affecting agricultural productivity. Farmers explained that continuous chemical fertilizer usage had reduced soil quality and increased dependency on artificial agricultural inputs. Some farmers expressed concern regarding declining crop productivity and increasing farming expenses.

Despite these challenges, positive interest regarding sustainable farming practices was observed among younger farmers. Many respondents showed willingness to learn eco-friendly farming methods and participate in awareness programs related to organic farming and environmental conservation.

Major Findings Identified

- Lack of awareness regarding sustainable farming practices
- Excessive dependency on chemical fertilizers and pesticides
- Limited knowledge regarding water conservation techniques
- Soil fertility degradation observed in agricultural fields
- Increasing farming expenses affecting farmers
- Interest in organic farming increasing among younger farmers
- Need for awareness regarding eco-friendly agricultural methods

Root Causes Identified

CHAPTER 3

SURVEY DATA ANALYSIS

3.3 Key Findings, Root Causes & Recommendations

The surveyBased on the survey findings, field observations, and stakeholder interaction conducted during the internship, several recommendations were identified for improving awareness regarding sustainable farming practices and encouraging environmentally responsible agriculture.

One of the major recommendations is the organization of regular farmer awareness programs and agricultural training sessions. Farmers should be educated regarding the environmental and economic benefits of sustainable farming practices such as organic farming, compost preparation, crop rotation, mixed cropping, and natural pest control methods.

Promotion of organic farming methods is essential for improving soil fertility, reducing environmental pollution, and protecting groundwater resources. Farmers should be encouraged to reduce dependency on chemical fertilizers and adopt natural agricultural alternatives that support long-term agricultural sustainability.

Water conservation techniques should also be promoted through awareness programs and practical demonstrations. Farmers need proper guidance regarding drip irrigation systems, rainwater harvesting methods, and efficient water management techniques that can help conserve water resources and improve irrigation efficiency.

Government institutions and NGOs should increase support for rural agricultural awareness programs and provide technical assistance, training opportunities, and financial support for farmers interested in sustainable farming methods.

Workshops, awareness campaigns, field demonstrations, and community-based agricultural programs should be organized regularly to improve farmer understanding regarding environmentally friendly agricultural practices.

Recommendations

- Conduct regular farmer awareness and training programs
- Promote organic farming and natural fertilizers
- Encourage water conservation and efficient irrigation systems
- Increase government and NGO support for sustainable agriculture
- Organize sustainable farming workshops and field demonstrations
- Improve awareness regarding soil conservation methods
- Encourage eco-friendly agricultural practices within farming communities

The recommendations focus on improving farmer awareness, environmental sustainability, and long-term agricultural productivity through education and community participation.

CHAPTER 4

INTERVENTION & AWARENESS ACTIVITIES / OUTCOME

4.1 Need for Intervention

Based on the survey findings, field observations, and stakeholder interaction conducted during the internship, several recommendations were identified for improving awareness regarding sustainable farming practices and encouraging environmentally responsible agriculture.

One of the major recommendations is the organization of regular farmer awareness programs and agricultural training sessions. Farmers should be educated regarding the environmental and economic benefits of sustainable farming practices such as organic farming, compost preparation, crop rotation, mixed cropping, and natural pest control methods.

Promotion of organic farming methods is essential for improving soil fertility, reducing environmental pollution, and protecting groundwater resources. Farmers should be encouraged to reduce dependency on chemical fertilizers and adopt natural agricultural alternatives that support long-term agricultural sustainability.

Water conservation techniques should also be promoted through awareness programs and practical demonstrations. Farmers need proper guidance regarding drip irrigation systems, rainwater harvesting methods, and efficient water management techniques that can help conserve water resources and improve irrigation efficiency.

Government institutions and NGOs should increase support for rural agricultural awareness programs and provide technical assistance, training opportunities, and financial support for farmers interested in sustainable farming methods.

Workshops, awareness campaigns, field demonstrations, and community-based agricultural programs should be organized regularly to improve farmer understanding regarding environmentally friendly agricultural practices.

Recommendations

- Conduct regular farmer awareness and training programs
- Promote organic farming and natural fertilizers
- Encourage water conservation and efficient irrigation systems
- Increase government and NGO support for sustainable agriculture
- Organize sustainable farming workshops and field demonstrations
- Improve awareness regarding soil conservation methods
- Encourage eco-friendly agricultural practices within farming communities

The recommendations focus on improving farmer awareness, environmental sustainability, and long-term agricultural productivity through education and community participation.

life.

CHAPTER 4

INTERVENTION & AWARENESS ACTIVITIES / OUTCOME

4.2 Awareness & Intervention Activities Conducted

Based on theThe awareness and intervention activities received positive participation from farmers and agricultural stakeholders within the community. Farmers actively interacted with students during awareness sessions and showed interest in understanding sustainable farming methods and eco-friendly agricultural practices.

Many respondents expressed concern regarding increasing farming expenses, declining soil fertility, and environmental challenges affecting agriculture. Farmers also shared their experiences regarding crop cultivation difficulties, irrigation problems, and fertilizer dependency during discussion sessions.

Positive feedback was received regarding the awareness activities conducted during the internship. Farmers showed interest in learning modern agricultural techniques such as drip irrigation, compost preparation, organic fertilizers, and natural pest management methods. Increased awareness regarding water conservation and environmental protection was observed during stakeholder interaction and feedback collection activities.

The participation of agriculture officers and NGO experts also contributed significantly toward improving awareness regarding sustainable farming and encouraging environmentally responsible agricultural practices within the farming community.

Community Response Observed

- Farmers actively participated in awareness sessions
- Positive feedback received from stakeholders
- Interest shown regarding organic farming methods
- Awareness regarding water conservation increased
- Farmers expressed willingness to learn eco-friendly techniques
- Improved discussion regarding environmental protection observed

The intervention activities highlighted the importance of continuous awareness and farmer education programs in promoting sustainable agricultural development.

CHAPTER 4

INTERVENTION & AWARENESS ACTIVITIES / OUTCOME

4.3 Community Response & Participation

The Promotion of organic farming methods is essential for improving soil fertility, reducing environmental pollution, and protecting groundwater resources. Farmers should be encouraged to reduce dependency on chemical fertilizers and adopt natural agricultural alternatives that support long-term agricultural sustainability.

Water conservation techniques should also be promoted through awareness programs and practical demonstrations. Farmers need proper guidance regarding drip irrigation systems, rainwater harvesting methods, and efficient water management techniques that can help conserve water resources and improve irrigation efficiency.

Government institutions and NGOs should increase support for rural agricultural awareness programs and provide technical assistance, training opportunities, and financial support for farmers interested in sustainable farming methods.

Workshops, awareness campaigns, field demonstrations, and community-based agricultural programs should be organized regularly to improve farmer understanding regarding environmentally friendly agricultural practices.

Recommendations

- Conduct regular farmer awareness and training programs
- Promote organic farming and natural fertilizers
- Encourage water conservation and efficient irrigation systems
- Increase government and NGO support for sustainable agriculture
- Organize sustainable farming workshops and field demonstrations
- Improve awareness regarding soil conservation methods
- Encourage eco-friendly agricultural practices within farming communities

The recommendations focus on improving farmer awareness, environmental sustainability, and long-term agricultural productivity through education and community participation.

CHAPTER 4 – INTERVENTION & AWARENESS ACTIVITIES

4.1 Awareness & Intervention Activities Conducted

Based on the survey findings, field observations, and stakeholder interaction conducted during the internship, several recommendations were identified for improving awareness regarding sustainable farming practices and encouraging environmentally responsible agriculture.

One of the major recommendations is the organization of regular farmer awareness programs and agricultural training sessions. Farmers should be educated regarding the environmental and economic benefits of sustainable farming practices such as organic farming, compost preparation, crop rotation, mixed cropping, and natural pest control methods.

CHAPTER 4

INTERVENTION & AWARENESS ACTIVITIES / OUTCOME

4.4 Outcomes of the Intervention The awareness and intervention activities received positive participation from farmers and agricultural stakeholders within the community. Farmers actively interacted with students during awareness sessions and showed interest in understanding sustainable farming methods and eco-friendly agricultural practices.

Many respondents expressed concern regarding increasing farming expenses, declining soil fertility, and environmental challenges affecting agriculture. Farmers also shared their experiences regarding crop cultivation difficulties, irrigation problems, and fertilizer dependency during discussion sessions.

Positive feedback was received regarding the awareness activities conducted during the internship. Farmers showed interest in learning modern agricultural techniques such as drip irrigation, compost preparation, organic fertilizers, and natural pest management methods. Increased awareness regarding water conservation and environmental protection was observed during stakeholder interaction and feedback collection activities.

The participation of agriculture officers and NGO experts also contributed significantly toward improving awareness regarding sustainable farming and encouraging environmentally responsible agricultural practices within the farming community.

Community Response Observed

- Farmers actively participated in awareness sessions
- Positive feedback received from stakeholders
- Interest shown regarding organic farming methods
- Awareness regarding water conservation increased
- Farmers expressed willingness to learn eco-friendly techniques
- Improved discussion regarding environmental protection observed

The intervention activities highlighted the importance of continuous awareness and farmer education programs in promoting sustainable agricultural development.

CHAPTER 4

INTERVENTION & AWARENESS ACTIVITIES / OUTCOME

4.5 Reflection on Impact

The intervention and awareness activities conducted during the Social Internship Program provided meaningful exposure to real-world community challenges related to health, hygiene, and safe drinking water practices. Through direct interaction with community members, students gained practical understanding regarding the importance of awareness, communication, and community participation in addressing social issues.

The activity helped in identifying gaps in hygiene awareness, sanitation practices, and preventive healthcare knowledge within the community. Interaction with stakeholders allowed students to better understand the difficulties faced by residents and recognize the importance of continuous awareness and education in improving public health conditions.

The intervention process also strengthened students' practical skills, including communication, leadership, observation, and problem-solving abilities. Working closely with the community provided valuable experience in understanding social responsibility and the importance of contributing toward positive societal change.

Overall, the Social Internship Program created an opportunity to bridge classroom learning with real-world experiences. The awareness activities not only benefited the community through education and interaction but also helped students develop a deeper understanding of community engagement and social impact.

Key Reflections

- Practical understanding of real-world community challenges was gained.
- Improved communication and stakeholder interaction skills were developed.
- Awareness activities highlighted the importance of preventive healthcare.
- Community engagement strengthened social responsibility and empathy.
- The internship experience contributed toward personal and professional growth.

CHAPTER 5

INTERNSHIP EXPERIENCE & KEY LEARNINGS

5.1 Overall Internship Experience

The Social InternshipThe Social Internship Program provided meaningful practical exposure to agricultural and environmental challenges affecting farming communities. Through field visits, surveys, farmer interaction, stakeholder discussions, and awareness activities, students gained valuable understanding regarding sustainable agriculture and environmental conservation.

The internship helped students understand real-world agricultural problems such as excessive chemical usage, soil degradation, water scarcity, irrigation challenges, and lack of awareness regarding eco-friendly farming practices. Direct interaction with farmers and agricultural experts provided practical insights regarding rural agricultural conditions and the importance of awareness and education in improving farming practices.

The program also provided opportunities to apply classroom knowledge in practical situations by engaging directly with farming communities and understanding environmental sustainability issues from a broader perspective.

CHAPTER 5

INTERNSHIP EXPERIENCE & KEY LEARNINGS

5.2 Key Learnings from the Internship

The The internship experience helped students develop practical, interpersonal, and analytical skills through community engagement and field interaction activities.

Major Learnings

Practical Understanding of Agricultural Challenges

Students gained direct exposure regarding farming difficulties, irrigation problems, soil fertility concerns, and environmental issues affecting agriculture.

Improved Communication Skills

Interaction with farmers, agriculture officers, and stakeholders improved communication, public speaking, and community engagement abilities.

Better Understanding of Sustainable Agriculture

Students learned the importance of organic farming, soil conservation, water management, and environmentally responsible agricultural methods.

Environmental Awareness

The internship increased awareness regarding environmental protection, natural resource conservation, and sustainable development practices.

Observation and Leadership Skills

Field observation, surveys, and awareness activities improved leadership qualities, analytical thinking, and observation skills among students.

Skill Development Highlights

- Improved stakeholder interaction skills
- Better understanding regarding sustainable farming
- Enhanced communication and leadership abilities
- Practical exposure to agricultural field work
- Increased awareness regarding environmental sustainability

The internship experience contributed significantly toward personal, professional, and social development through experiential learning and community participation.

.

CHAPTER 5

INTERNSHIP EXPERIENCE & KEY LEARNINGS

5.3 Challenges Faced During Field Work

During The Social Internship Program provided meaningful practical exposure to real-world agricultural and environmental challenges affecting farming communities. Through field visits, farmer interaction, stakeholder discussions, surveys, data collection, and awareness activities, students gained valuable understanding regarding sustainable agriculture and the importance of environmental conservation in farming practices.

The internship experience helped students understand the practical difficulties faced by farmers in maintaining soil fertility, managing water resources, reducing farming costs, and adopting eco-friendly agricultural methods. Direct interaction with farmers and agricultural experts created opportunities to understand rural agricultural conditions beyond classroom learning and helped students develop social responsibility toward community development.

The internship also improved communication, leadership, observation, and analytical abilities through continuous field interaction and awareness activities. Students learned how awareness and education can contribute significantly toward promoting sustainable agricultural practices and environmental protection within farming communities.

Major Learnings from

During the Social Internship Program, students faced several practical challenges while conducting field visits, surveys, awareness sessions, and interaction with farmers and agricultural stakeholders. Working directly with farming communities provided real-world exposure regarding the difficulties involved in agricultural field work and community engagement activities.

One of the major challenges faced during the internship was collecting accurate survey responses from farmers. In some cases, farmers were hesitant to participate in discussions or had limited understanding regarding sustainable farming practices. Communication barriers and differences in local language and terminology also created minor difficulties during field interaction activities.

Another challenge observed during the field work was the limited awareness regarding eco-friendly agricultural methods among some respondents. Many farmers were highly dependent on chemical fertilizers and traditional farming methods, making it difficult to explain the importance of sustainable farming practices within a short period of time.

Water scarcity and environmental conditions in farming areas also affected observation activities and field visits. S

CHAPTER 5

INTERNSHIP EXPERIENCE & KEY LEARNINGS

5.4 Skills Developed Through Internship

The Social Time management during surveys, awareness activities, and stakeholder interaction sessions required proper planning and coordination. Organizing field observations, documenting survey responses, and conducting awareness programs within the internship duration was also challenging.

Despite these difficulties, students successfully completed the internship activities through teamwork, communication, continuous interaction with stakeholders, and proper coordination during field activities.

Major Challenges Faced

1. Difficulty in Collecting Survey Responses

Some farmers were hesitant to participate in surveys and awareness discussions, which made data collection slightly challenging.

2. Communication Barriers

Differences in language, local terminology, and awareness levels created communication difficulties during stakeholder interaction.

3. Limited Awareness Regarding Sustainable Farming

Several respondents lacked proper knowledge regarding organic farming, soil conservation, and eco-friendly agricultural practices.

4. Time Management During Field Activities

Managing surveys, field visits, documentation, and awareness sessions within the internship duration required careful planning and coordination.

5. Environmental and Irrigation Challenges

Water scarcity, improper irrigation systems, and harsh field conditions affected agricultural observation activities.

6. Organizing and Documenting Field Data

Recording survey responses, organizing field observations, and preparing reports required continuous effort and teamwork.

How the Challenges Were Addressed

- Maintained clear communication with farmers and stakeholders
- Conducted repeated interaction where necessary
- Used observation and guidance from agriculture officers for better understanding
- Improved coordination and teamwork during field activities
- Organized survey data carefully for proper documentation
- Encouraged active participation through awareness discussions

The challenges faced during the internship provided valuable learning experiences and helped students improve practical problem-solving abilities, communication skills, adaptability, and understanding regarding community-level agricultural wo

CHAPTER 5

INTERNSHIP EXPERIENCE & KEY LEARNINGS

5.5 Reflection on Social Responsibility

The Social Internship Program Major Learnings from the Internship

1. Practical Understanding of Agricultural Challenges

Students gained direct exposure regarding farming-related problems such as excessive chemical fertilizer usage, soil degradation, water scarcity, irrigation difficulties, pest management issues, and environmental concerns affecting agriculture. Field interaction helped students understand the real-life difficulties faced by farmers and the importance of sustainable agricultural practices.

2. Improved Communication Skills

Interaction with farmers, agriculture officers, NGO experts, and community members improved communication and public interaction skills. Students learned how to conduct discussions, explain awareness topics, and interact confidently with stakeholders during surveys and awareness sessions.

3. Better Understanding of Sustainable Agriculture

The internship provided detailed understanding regarding organic farming, soil conservation, crop rotation, natural fertilizers, compost preparation, water conservation techniques, and environmentally friendly farming methods. Students learned the importance of balancing agricultural productivity with environmental sustainability.

4. Environmental Awareness

Students developed greater awareness regarding environmental protection, natural resource conservation, climate-friendly farming practices, and the harmful effects of excessive chemical farming. The internship emphasized the importance of sustainable development and responsible agricultural methods.

5. Observation and Analytical Skills

Field observation and survey activities improved analytical thinking and observation abilities among students. Students learned how to identify agricultural problems, understand community-level challenges, analyze farming conditions, and interpret survey findings effectively.

6. Leadership and Teamwork Skills

Awareness activities and community engagement programs helped students improve leadership qualities, teamwork, coordination, and responsibility while organizing awareness sessions and interacting with farming communities.

Skill Development Highlights

.

CHAPTER 6

CONCLUSION

6.1 Conclusion

The Social The Social Internship Program provided valuable practical exposure to agricultural and environmental challenges related to sustainable farming awareness. Through farmer interaction, field visits, surveys, stakeholder discussions, data analysis, and awareness activities, meaningful understanding regarding sustainable agriculture and environmental conservation was developed.

The study identified several major agricultural concerns such as excessive chemical fertilizer usage, limited awareness regarding organic farming, improper irrigation methods, soil fertility degradation, and lack of knowledge regarding water conservation techniques. Field observations and survey findings highlighted the importance of awareness and education in encouraging eco-friendly agricultural practices among farming communities.

The intervention and awareness activities conducted during the internship encouraged farmers to understand the importance of sustainable farming methods, environmental protection, soil conservation, and responsible water management practices. Positive participation from farmers and agricultural stakeholders demonstrated increasing interest regarding eco-friendly agriculture and modern sustainable farming techniques.

The internship experience also helped students develop important practical skills such as communication, observation, leadership, stakeholder interaction, problem-solving, and data analysis. Direct interaction with farming communities strengthened understanding regarding social responsibility, agricultural sustainability, and environmental awareness.

Overall, the Social Internship Program served as a meaningful learning experience by bridging classroom learning with practical agricultural exposure and community engagement. The internship not only contributed toward understanding real-world agricultural challenges but also encouraged active participation in promoting awareness regarding sustainable farming and environmental conservation.

SURVEY FORMS

Questionnaires Used for Field Data Collection during the Social Internship Program

The following questionnaires were used to collect responses from stakeholders regarding health, hygiene, and sanitation practices within the community.

SF 1 — Personal Hygiene Survey (Households)

Stakeholder: Households

Personal Hygiene Questionnaire

Total Respondents: 8

S. No	Question	Response
1	are training conducted?	Yes / No
2	Are farmer participating?	Yes / No
3	Are sustainable methods	Yes / No
4	Are demo farmer available?	Yes / No
5	Are farmers interested?	Yes / No
6	Are challenge faced?	Yes / No
7	Are field demonstrations?	Yes / No
8	Are result visible?	Yes / No

Survey Objective

To understand personal hygiene habits, sanitation awareness, and hygiene-related practices followed within households.

SURVEY FORMS

The following questionnaires were used to collect responses from stakeholders regarding health, hygiene, and sanitation practices within the community.

SF 2 — Personal Hygiene Survey (Students)

Stakeholder: Students

Personal Hygiene Questionnaire

Total Respondents: 6

S. No	Question	Response
1	ARE you aware of sustaniable practices?	Yes / No
2	Do you practice crop rotation?	Yes / No
3	Do you use organic inputs?	Yes / No
4	Are you willing to adopt new methods? Do you	Yes / No
5	fhave you receive tranning?	Yes / No
6	? do you see benefits	Yes / No

Survey Objective

To understand hygiene awareness and daily personal hygiene habits among students.

SURVEY FORMS

The following questionnaires were used to collect responses from stakeholders regarding health, hygiene, and sanitation practices within the community.

SF 3 — Personal Hygiene Survey (Health Workers)

Stakeholder: Health Workers

Personal Hygiene Questionnaire

Total Respondents: 6

S. No	Question	Response
1	Are awareness program active ?	Yes / No
2	Is adoption low?	Yes / No
3	Are challenges faced?	Yes / No
4	Are farmers interested?	Yes / No
5	Are field demonstrations effective?	Yes / No
6	Are results visible?	Yes / No

Survey Objective

To understand community-level health concerns, hygiene awareness, and preventive healthcare practices from the perspective of health workers.

REFERENCES

The following sources were referred to during the Social Internship Program for understanding health, hygiene, safe drinking water practices, and community awareness.

1. Government & Educational Resources Food and Agriculture Organization (FAO), “Sustainable Agriculture and Rural Development,” FAO Publications, Rome.
2. United Nations Sustainable Development Goals (SDGs), Goal 2: Zero Hunger, Goal 12: Responsible Consumption and Production, Goal 13: Climate Action, and Goal 15: Life on Land.
3. Ministry of Agriculture & Farmers Welfare, Government of India – Agricultural Sustainability Reports and Farmer Welfare Programs.
4. Indian Council of Agricultural Research (ICAR), Research Articles on Sustainable Farming Practices and Soil Conservation Methods.
5. National Bank for Agriculture and Rural Development (NABARD), Rural Development and Sustainable Agriculture Awareness Materials.
6. Organic Farming Association of India, Awareness Materials on Organic Farming and Natural Fertilizers.
7. Agricultural and Environmental Research Journals related to Sustainable Farming, Water Conservation, and Soil Management.
8. Information collected through field surveys, farmer interaction, stakeholder discussions, and agricultural field observations conducted during the Social Internship Program.
9. Discussions and interaction with farmers, agriculture officers, NGO experts, and local residents during community engagement activities.
10. Internet resources and reference materials related to:
 - Organic Farming
 - Drip Irrigation
 - Water Conservation
 - Soil Fertility Management
 - Sustainable Agricultural Practices
11. Environmental awareness articles and government agricultural guidelines related to eco-friendly farming and resource conservation.
12. Field observation reports and awareness activities conducted as part of the Social Internship Program on “Lack of Awareness on Sustainable Farming.”
13. Books and study materials related to:
 - Sustainable Agriculture
 - Environmental Science
 - Organic Farming Techniques
 - Rural Development and Community Awareness
14. Reports published by agricultural NGOs and environmental organizations working on farmer education and sustainable farming awareness.
15. Educational websites and agricultural portals used for literature review and data collection regarding sustainable farming methods and environmental conservation.

ANNEXURE

The annexure section forms an additional supporting part of the Social Internship Report and has been included for documentation purposes. The Social Internship Program was successfully carried out through field visits, stakeholder interaction, surveys, awareness activities, and community engagement related to the project title “Health and Hygiene” under the problem statement “Unsafe Drinking Water & Hygiene Practices.”

All major supporting records, including survey forms, field photographs, certificates, and activity-based documentation, have been included in their respective sections of this report. Therefore, this annexure section serves as a formal supplementary component to ensure completeness and systematic organization of the Social Internship Report for the Academic Year 2026–27.
